## Abstract

Offline evaluation provides characterization of an IR system based on human judgments without relying on actual users in real-world environment. Offline evaluation, notably test collection based evaluation, has been dominant approaches in IR evaluation. It is no exaggeration that shared evaluation efforts such as TREC has defined the IR research over the years. The reason for this success lies in the ability to compare retrieval systems in a reusable manner.

Recently, there has been several trends which necessitates the change in the role and method of offline evaluation. First and foremost, online search engines with large-scale user base has become commonplace, enabling online evaluation based on user behavior. Also, there are many endpoints for search beyond desktop web browser, and the types of search results has diversified beyond the list of web documents to include other results types and direct answers. Finally, crowdsourcing has provided ways for human judgments of any kind to be collected at an large scale. The overall outcome of this trend is the advent of IR evaluation paradigm which is more user-centric, diverse and agile.

This survey aims to provide an overview of recent research in IR evaluation pertaining to the trends above. We first introduce offline evaluation for IR, focusing on how it relates to other evaluation paradigms such as online evaluation. We also overview traditional offline evaluation for IR, and how recent trends have shaped the research so far. We then review research in offline evaluation mainly on three levels: human judgment, evaluation metric and experiment design. This organization will allow readers to follow recent developments in research from micro-level (human judgment) to macro-level (experiment). Finally, we discuss evaluation practices from industry, which has been a major driving force in research and development in IR.

# 1

---

## Introduction

---

### 1.1 Evaluation Paradigms in IR

New Landscape in IR Evaluation Research - More endpoints / models  
- User-centric view (understanding user) - Online evaluation (industry)  
- Agile experimentation (crowdsourcing)

Online vs. Offline evaluation - What is it? Why is it important? How is it used? - How are they different? Katja Hofmann [2016] Sanderson [2010]

Offline evaluation vs. Log study (Click Modeling) - Label-based vs. Behavior-based - Experimental control(?)

Offline evaluation vs. User study - Focus: system-to-system evaluation vs. understanding interaction/user behavior - Scale(?) / Richness(?) - Blurred distinction recently Bron et al. [2013] Liu et al. [2014] Shah and González-Ibáñez [2011]

### 1.2 Offline Evaluation for IR

Traditional Approaches in Offline Evaluation - Concept of relevance - Labels/Metrics based on Query-URLs - Test collections Borlund [2003] Cleverdon [1967] Voorhees and Harman [2005]

General Components of Offline Evaluation - Search Task (Query / context) - Judging Method (Interface / rating scale) - Metric - Experiment

### **1.3 Recent Trends in Offline Evaluation**

Need for User-centric Evaluation - Definition of User-centric - Aiming for user satisfaction - Evaluation based on models of user behavior

Traditional metrics seem to not agree much with online signals, as well as each other Radlinski and Craswell [2010]

Need methodologies to better estimate user satisfaction and behavior - Metric design - Judgment design

Extending the realms of evaluation - Whole-page evaluation - Session-level evaluation - Desktop vs. Mobile / Typed vs. Spoken IR Bailey et al. [2010] Thomas and Hawking [2006] Carterette et al. [2008]

Online-Offline Hybrid approaches - Log-based offline evaluation Li et al. [2015] Li et al. [2010] - Collecting feedback directly from users (Kim et al.) - Crowdsourcing / Agile Experiment

# 2

---

## Human Judgment

---

Collecting labels at scale

### 2.1 Judgment Design

SERP-level evaluation Side by side / SASI Thomas and Hawking [2006]  
Chandar and Carterette [2013] Al-Maskari et al. [2007] Bailey et al.  
[2010] Carterette et al. [2008]

Session/Task-based evaluation User study for search experience

Effort based judgments Yilmaz et al. [2014]

Relevance vs. Usefulness-based evaluation

### 2.2 Judgment Collection

Choosing Judges: Crowd vs. Expert vs. Real-Users Scholer et al. [2013]  
Kazai et al. [2013] Alonso and Mizzaro [2012]

Reducing noise in judging: Multiple judgments and majority voting,  
etc. Venanzi et al. [2014]

More efficient judgment collection - Design decisions that need to  
be tackled Blanco et al. [2011] Kazai et al. [2012] Alonso [2012] Alonso  
et al. [2015] - Incentivising judges and how to make it more attractive

(payment / I/F) Megorskaya et al. [2015] Davtyan et al. [2015] Rokicki et al. [2014] Eickhoff et al. [2012]

---

## Evaluation Metrics

---

From labels to meaningful numbers

- Basic IR evaluation metrics - Ranking-based metrics (Tau/TauAP)

- Evaluation metrics that are based on explicit models of user behaviour
  - o ERR, EBU, GAP, Time-biased gain, etc.
  - o Alpha-NDCG, IA metrics, etc.
  - o RBP / INST (notion of residual)

- Estimating the distribution of parameters/metric values based on user data

- Metrics for other domains Aggregate search Zhou et al. [2013]

# 4

---

## Experiment Design

---

Drawing conclusions from metrics

Hypothesis Testing Dinçer et al. [2014]

Analysis of Results Power analysis Sensitivity analysis Informativeness (MaxEnt) Bron et al. [2013] Urbano et al. [2013] Boytsov et al. [2013] Sakai [2014] Robertson and Kanoulas [2012]
